

Cloud Backup Suite

Introduction

Organizations understand that they need to protect their most important asset, their data. In today's world data resides everywhere. While it continues to reside in organizations' physical and virtual servers, today, more and more critical organizational data resides only in the cloud. This important cloud-based data needs to be protected and available just the same as data stored in more conventional places. G Suite® by Google Cloud provides advantages to organizations of all sizes and it demands the same high-level data backup and recovery solutions as other traditional on-premise applications.

The Need

Since SaaS (Software as a Service) applications are built for the cloud, many organizations and individuals believe that their valuable data is automatically protected and available. Cloud-based application vendors do provide a basic level of protection, but their backups are designed to meet their own requirements and not those of end users. Customer data must be:

- Safe from the most common cause of data loss, user error
- Recoverable from data loss due to system errors
- Available longer than a short 30-day window
- Protected against internal and external threats
- Available quickly when needed in the proper format

SaaS application users need to make sure that they have these additional levels of protection and accessibility in order to meet basic organizational needs.

The Solution

To meet this critical need for cloud-based protection, Offsite Computer Backup's Cloud Backup for G Suite® provides a flexible, easy-to-use solution for the protection, management and recovery of G Suite data. It is protected, encrypted and made available through an intuitive, web-based interface. Users can recover a file, a folder, or an entire user account quickly and easily in its original format.

The Coverage

Cloud Backup for G Suite provides protection for:

- Gmail
- Calendars
- Contacts
- Google Drive
- Public Shared Folders
- Google Sites

Features and Benefits

Features	Benefit
Accessibility	Service is available through any internet-connected device.
Protection of Backup Data	Data is protected by state-of-the-art compression and encryption and stored in SSAE 16 Type 2 certified data centers (formerly SAS 70).
Efficiency & Reliability	Users can restore a document, a folder, or all content without deleting or overwriting.
Fast Recovery	Needed files or folders can be identified, restored and downloaded immediately.
User Transparency	Data additions or changes are identified automatically and backed up without user intervention.
Ease of Use	All backup data and recovery controls are menu-driven, intuitive, and complete.
Best Use of Resources	Lower IT costs: no software or hardware overhead, no worries about updating or maintenance plans. Predicable fair pricing plans.
Flexibility & Scalability	Easy to adjust to the changing demands of systems or users.
Retention	All data is stored indefinitely.
